- ✓ **Own Products:**
 - Possibility to set up and get the settings on availability of tariff(s) is added (array "availabilityTerms") in GET /prices and PUT /accommodationPrices in the array "tariffs"
 - The structure of the request of PUT /availability is changed
- ✓ **Activities:** New method GET /events is added
- ✓ **Invoices:** New parameter "transactionDateTime" is added
- ✓ **Companies:** A new parameter "priorityLevel" is added to push API

1. New Capabilities of the Website

Within new release we have added a possibility to make a search on map search by radius relative to establishments, geographic locations, or prominent points of interest. It can be very helpful for looking up accommodation and that allow to filter more applicable search results.

The screenshot displays the GP Travel Enterprise interface. On the left, the search parameters are set for London, United Kingdom, for the dates 21 Dec 2021 (Tu) - 22 Dec 2021 (We) (1 night) for 2 guests. The price range is \$33.71 to \$1,367,746.99. The search results show 366 out of 1104 offers matching the filters. A list of hotels is displayed, including 45 Park Lane, Grosvenor House JW Marriott, and Mandarin Oriental Hyde Park London. On the right, a map shows the search area in London with a blue circle indicating the search radius.

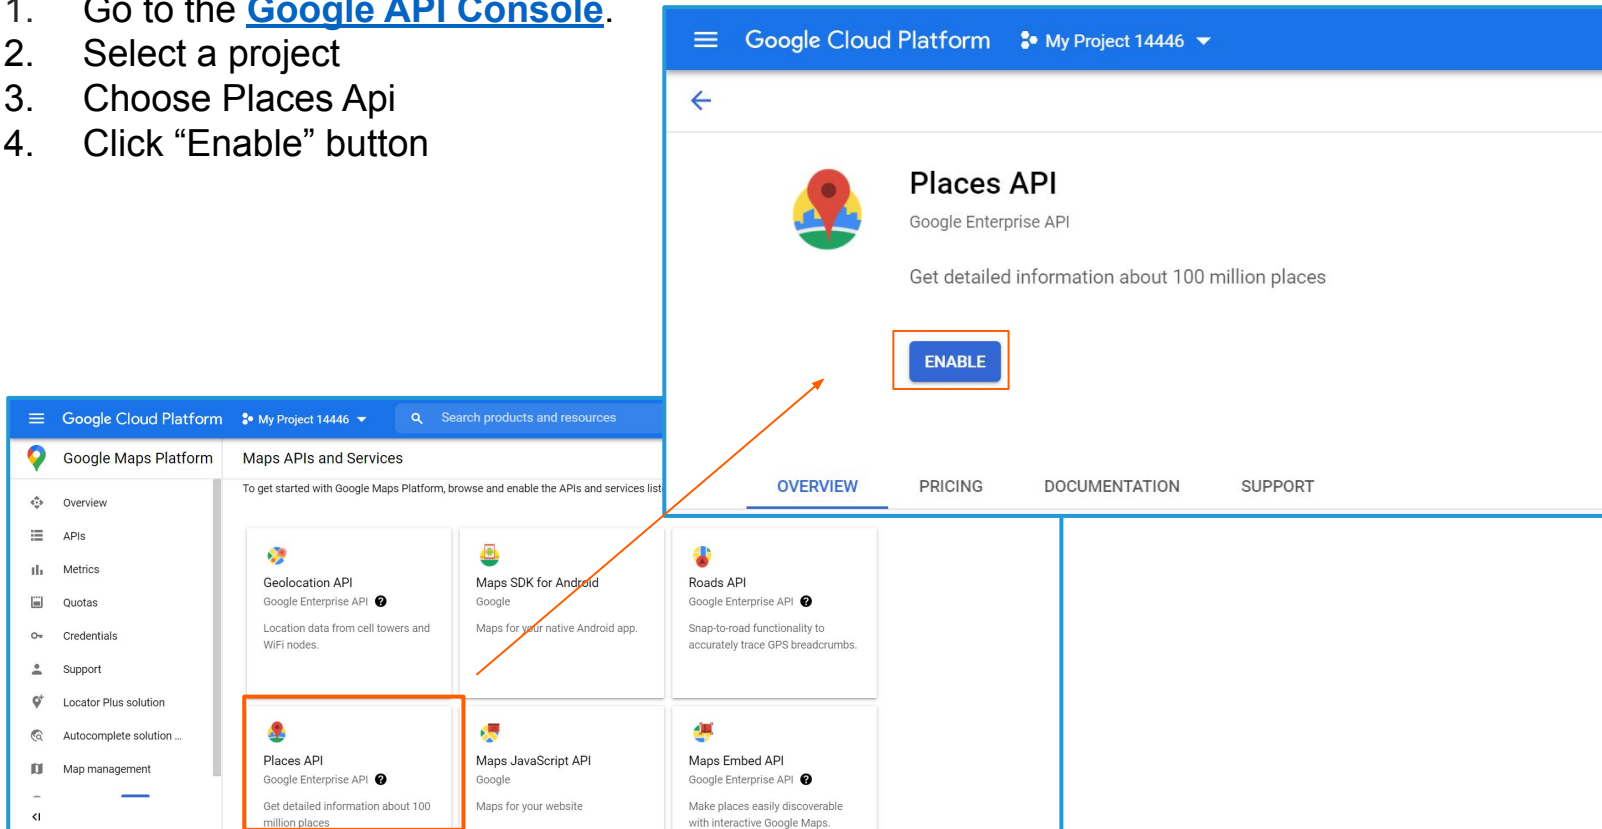

Access:

Main page >> Hotels>> Search hotels>> Search results page

Note: in order to connect new version of website, please contact GP technical support or your account manager

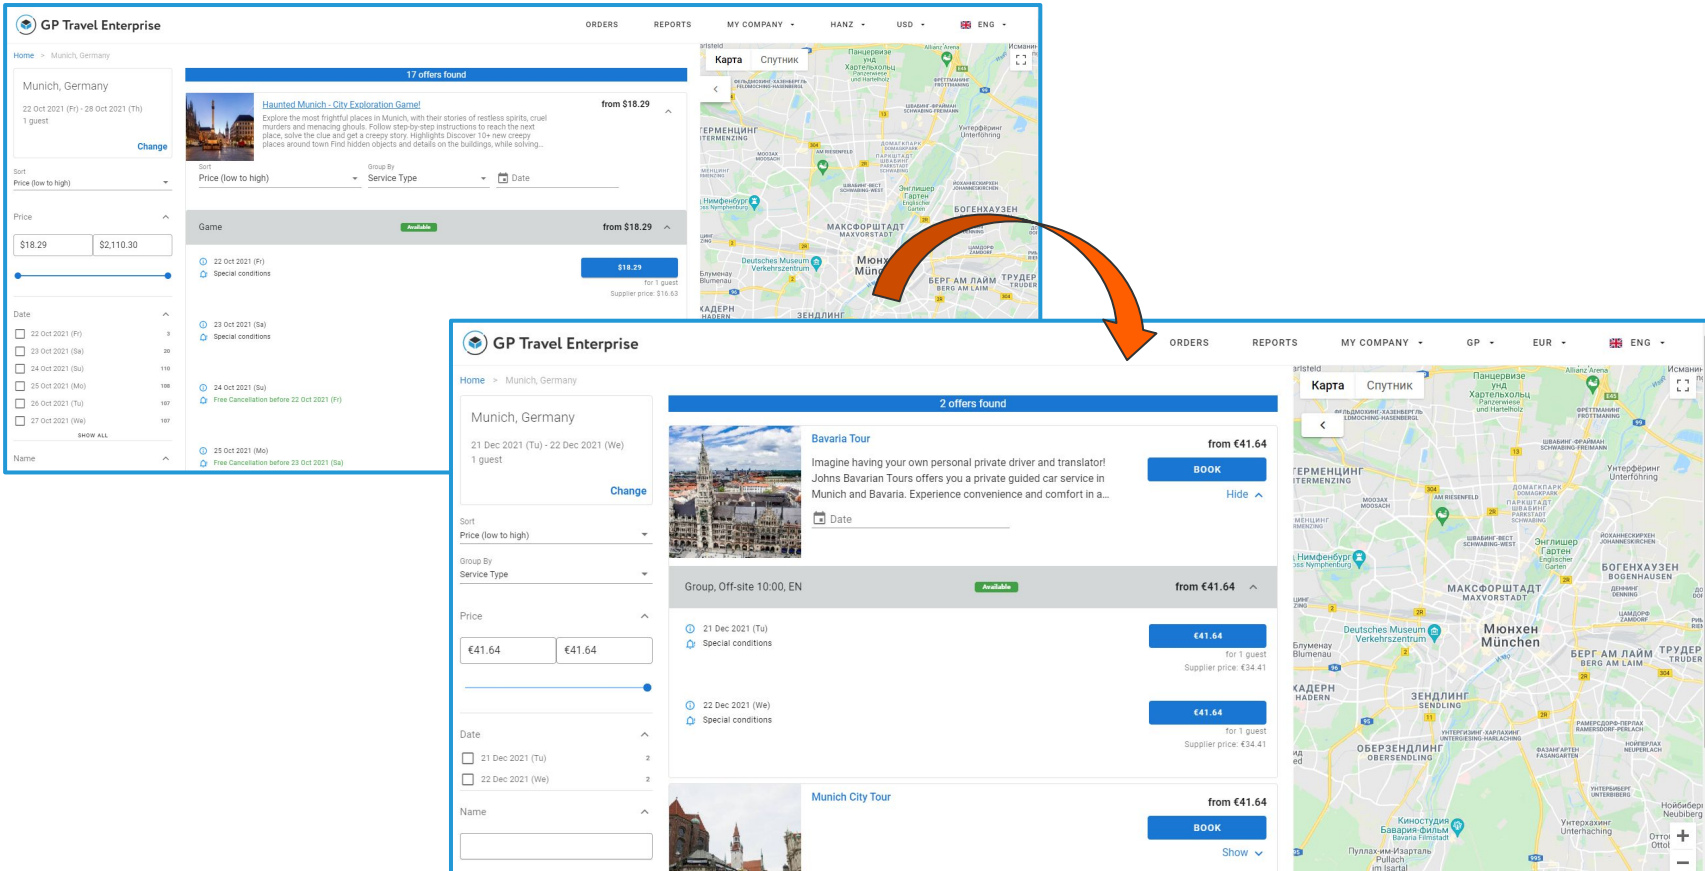

The search box returns a pick list that includes popular places and hotel addresses. To get a pick list on map it is necessary to enable Places API in the Google Maps Platform. Follow these steps:

1. Go to the [Google API Console](#).
2. Select a project
3. Choose Places API
4. Click “Enable” button

The screenshot displays the Google Cloud Platform console interface. On the left, a sidebar menu shows various navigation options, with 'Google Maps Platform' selected. The main content area is titled 'Maps APIs and Services' and lists several APIs. The 'Places API' is highlighted with an orange box. An orange arrow points from this box to a larger, detailed view of the 'Places API' page on the right. In this detailed view, the 'ENABLE' button is also highlighted with an orange box. The 'ENABLE' button is a blue rectangular button with white text.

Some UI enhancements of the Website have been made: updated design for activities search results page, activities description page, reservation page, order page.

The image displays two screenshots of the GP Travel Enterprise website, illustrating UI changes. The top screenshot shows the '17 offers found' for 'Munich, Germany' with a map of Munich. The bottom screenshot shows the '2 offers found' for 'Munich, Germany' with a map of Munich. An orange arrow points from the top screenshot to the bottom one, indicating a transition or update.

3. API Changes

GET /orders:

Information on booked tariff ("tariffId" and "tariffName") is added for Activities and Cars

Information on price before cancellation (container "priceBeforeCancellation") is added

Information on payment date of booking (both for Supplier and Client) is added

GET/events: new method is added which returns information on created activities with type = Event

PUT /availability: the structure of the request is changed to array to send multiple settings by one request

PUT /dailyRates: changes in parameters "closeDateStatus" and "minNights" / "maxNights"

PUT /invoicePaymentByKey: new parameter "transactionDateTime" to send information on date and time of invoice payment is added

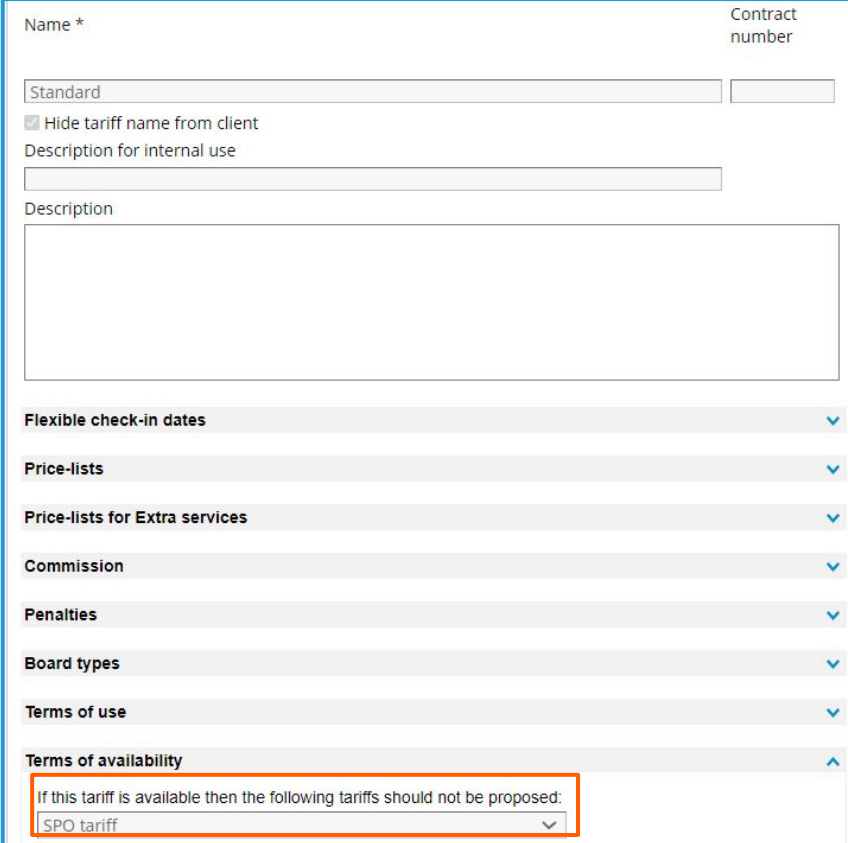

Push Orders: new parameters "customerPaymentStatus", "supplierPaymentStatus" was added to know actual payment status and parameter "websiteName" with information via which website booking was created

Push Companies: new parameter "priorityLevel" from Supplier and Legal Entities profile

Note: see the details on API changes here:

https://docs.softwaretravel.net/en/index.php?title=GP_Travel_Enterprise_API_Release_8.10

GET /prices and **PUT /accommodationPrices**: possibility to set up and get the settings on availability of tariff(s) is added (array "availabilityTerms") in GET /prices and PUT /accommodationPrices in the array "tariffs"

The screenshot shows a web form for configuring a tariff. At the top, there are two input fields: "Name *" with the value "Standard" and "Contract number". Below these is a checkbox labeled "Hide tariff name from client" which is checked. Underneath is a text area for "Description for internal use". A larger text area for "Description" follows. Below the description area is a list of expandable sections, each with a downward arrow: "Flexible check-in dates", "Price-lists", "Price-lists for Extra services", "Commission", "Penalties", "Board types", "Terms of use", and "Terms of availability". The "Terms of availability" section is expanded, showing a text label "If this tariff is available then the following tariffs should not be proposed:" and a dropdown menu with "SPO tariff" selected. This dropdown is highlighted with a red rectangle.

Note: see the details on API changes here:
