Stripe - migration to a new API for more secured payments

POST/onlinePayment/initiate

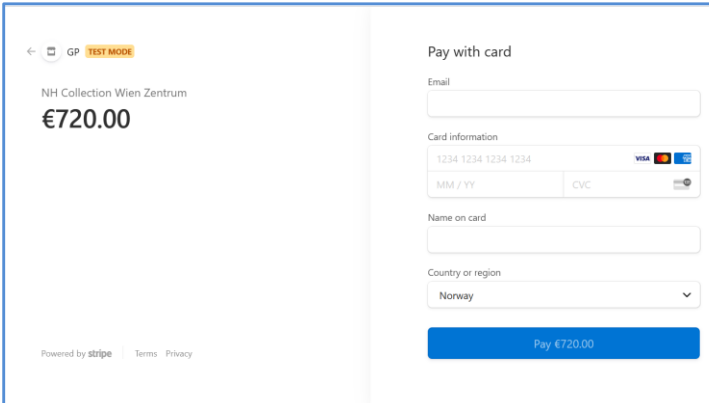

We have updated an integration to avoid declined payments due to Strong Customer Authentication.

During migration we have took into account that the integration includes following issues:

- ✓ 2-step payment
- ✓ possibility to save card details on the side of Stripe to withdraw money later in Back-Office
- ✓ Refund after cancellation (full and partial)

For extra fraud protection, 3D Secure requires customers to complete an additional verification step with the card issuer when paying.

3D Secure authentication is displayed when required by SCA (Strong Customer Authentication).

The screenshot displays a Stripe payment interface. On the left, a summary card shows the merchant name 'NH Collection Wien Zentrum' and the amount '€720.00'. At the bottom of this card, it says 'Powered by stripe' with links for 'Terms' and 'Privacy'. On the right, the 'Pay with card' section contains several input fields: 'Email', 'Card information' (with a card number '1234 1234 1234 1234', expiration date 'MM / YY', and CVC), 'Name on card', and 'Country or region' (set to 'Norway'). A blue button at the bottom right is labeled 'Pay €720.00'.
